### Claims

This listing of claims replaces all prior versions and listings of claims in the present application.

#### Claims 1-52 (Cancelled)

53. (Currently Amended) A method of operating a stream server, the stream server causing data streams to be provided from one or more stored audio/visual files, the method comprising: receiving a signal from a client device, said signal including an indication of a client requested presentation action that, when put into effect by the stream server, involves reducing a data rate of audio data of a first audio/visual stream being sent from the stream server to the client device or eliminating the transmission of the audio data of the first audio/visual stream to the client device; implementing the client requested presentation action, said act of implementing the client requested presentation action including reducing the data rate of the audio data of the first audio/visual stream or eliminating the transmission of the audio data of the first audio/visual stream to the client device; and

determining an amount that a data rate of a second audio/visual data stream may be increased as a result of an effect on transmission bandwidth corresponding to the reduction in the data rate of the audio data of the first audio/visual stream or the elimination of the audio data of the first audio/visual stream;

wherein said indication comprises an indication that audio be muted.

54. (Cancelled)

55. (Cancelled)

56. (Cancelled)

57. (Cancelled)

58. (Currently Amended) A method of operating a stream server, the stream server causing data streams to be provided from one or more stored audio/visual files, the method comprising:  
receiving a signal from a client device, said signal including an indication of a client requested presentation action that, when put into effect by the stream server, involves reducing a data rate of audio data of a first audio/visual stream being sent from the stream server to the client device or eliminating the transmission of the audio data of the first audio/visual stream to the client device;  
implementing the client requested presentation action, said act of implementing the client requested presentation action including reducing the data rate of the audio data of the first audio/visual stream or eliminating the transmission of the audio data of the first audio/visual stream to the client device;  
and  
determining an amount that a data rate of a second audio/visual data stream may be increased as a result of an effect on transmission bandwidth corresponding to the reduction in the data rate of the audio data of the first audio/visual stream or the elimination of the audio data of the first audio/visual stream; and  
The method of claim 53, further comprising:  
including both said first and second audio/video streams in different Single Program Transport Streams, each of said different Single Program Streams being part of a Multiple Program Transport Stream which includes both of said different Single Program Transport Streams.

59. (Currently Amended) A method of operating a stream server, the stream server causing data streams to be provided from one or more stored audio/visual files, the method comprising:  
receiving a signal from a client device, said signal including an indication of a client requested presentation action that, when put into effect by the stream server, involves reducing a data rate of audio data of a first audio/visual stream being sent from the stream server to the client device or eliminating the transmission of the audio data of the first audio/visual stream to the client device;  
implementing the client requested presentation action, said act of implementing the client requested presentation action including reducing the data rate of the audio data of the first audio/visual stream or eliminating the transmission of the audio data of the first audio/visual stream to the client device;  
and  
determining an amount that a data rate of a second audio/visual data stream may be increased as a result of an effect on transmission bandwidth corresponding to the reduction in the data rate of the

audio data of the first audio/visual stream or the elimination of the audio data of the first audio/visual stream; and

~~The method of claim 53,~~ wherein the act of reducing the data rate of audio data of the first data stream or eliminating the transmission of the audio data of the first audio/visual stream to the client device includes:

providing a stream of packets as part of a packet flow to a multiplexing device, said stream of packets including data packets which can be sent to the client device in said first audio/visual stream;

operating the multiplexer to perform a filtering operation on said stream of packets to reduce or eliminate the data rate of the audio data of the first audio/visual stream; and

operating the multiplexer to output said first audio/visual stream.

60. (Currently Amended) A method of operating a stream server, the stream server causing data streams to be provided from one or more stored audio/visual files, the method comprising:  
receiving a signal from a client device, said signal including an indication of a client requested presentation action that, when put into effect by the stream server, involves reducing a data rate of audio data of a first audio/visual stream being sent from the stream server to the client device or eliminating the transmission of the audio data of the first audio/visual stream to the client device;  
implementing the client requested presentation action, said act of implementing the client requested presentation action including reducing the data rate of the audio data of the first audio/visual stream or eliminating the transmission of the audio data of the first audio/visual stream to the client device;  
and

determining an amount that a data rate of a second audio/visual data stream may be increased as a result of an effect on transmission bandwidth corresponding to the reduction in the data rate of the audio data of the first audio/visual stream or the elimination of the audio data of the first audio/visual stream; and

~~The method of claim 53, further comprising:~~

providing the second audio/video stream to a device other than the client device, and not providing the first audio/video stream to the device other than the client device.

61. (Currently Amended) A method of operating a stream server, the stream server causing data streams to be provided from one or more stored audio/visual files, the method comprising: the stream server providing to one or more client devices a first audio/visual stream and a second audio/visual stream; receiving a signal from one of the client devices, said signal including an indication of a client requested presentation action that, when put into effect by the stream server, involves reducing a data rate of audio or video data of the first audio/visual stream or eliminating the transmission of the audio or video data of the first audio/visual stream; implementing the client requested presentation action, said act of implementing the client requested presentation action including reducing a data rate of audio or video data of the first audio/visual stream or eliminating the transmission of the audio or video data of the first audio/visual stream; and determining whether a third audio/visual stream may be streamed as a result of an effect on transmission bandwidth corresponding to a reduction in the data rate of audio or video data of the first audio/visual stream or eliminating the transmission of the audio or video data of the first audio/visual stream, wherein said indication comprises an indication that audio be muted.

62. (Cancelled)

63. (Cancelled)

64. (Currently Amended) A method of operating a stream server, the stream server causing data streams to be provided from one or more stored audio/visual files, the method comprising: the stream server providing to one or more client devices a first audio/visual stream and a second audio/visual stream; receiving a signal from one of the client devices, said signal including an indication of a client requested presentation action that, when put into effect by the stream server, involves reducing a data rate of audio or video data of the first audio/visual stream or eliminating the transmission of the audio or video data of the first audio/visual stream; implementing the client requested presentation action, said act of implementing the client requested presentation action including reducing a data rate of audio or video data of the first audio/visual

stream or eliminating the transmission of the audio or video data of the first audio/visual stream;  
and

determining whether a third audio/visual stream may be streamed as a result of an effect on  
transmission bandwidth corresponding to a reduction in the data rate of audio or video data of the  
first audio/visual stream or eliminating the transmission of the audio or video data of the first  
audio/visual stream, and

~~The method of claim 61, further comprising:~~

transmitting the first, second, and third audio/video streams each to different client devices.

65. (Currently Amended) A method of operating a stream server, the stream server causing data streams to be provided from one or more stored audio/visual files, the method comprising:  
receiving a signal from a client device, said signal including an indication of a client requested presentation action that, when put into effect by the stream server, involves increasing a data rate of audio data of a first audio/visual stream being sent from the stream server to the client device;  
implementing the client requested presentation action, said act of implementing the client requested presentation action including increasing the data rate of the audio data of the first audio/visual stream to the client device; and  
determining an amount that a data rate of a second audio/visual data stream should be reduced as a result of an effect on transmission bandwidth corresponding to the increase in the data rate of the audio data of the first audio/visual stream.

~~The method of claim 65, further comprising:~~

~~and including both said first and second audio/visual streams in different Single Program Transport Streams, each of said different Single Program Streams being part of a Multiple Program Transport Stream which includes both of said different Single Program Transport Streams.~~

66. (Cancelled)

67. (Cancelled)

68. (Cancelled)

69. (Currently Amended) A method of operating a stream server, the stream server causing data streams to be provided from one or more stored audio/visual files, the method comprising:  
receiving a signal from a client device, said signal including an indication of a client requested presentation action that, when put into effect by the stream server, involves increasing a data rate of audio data of a first audio/visual stream being sent from the stream server to the client device;  
implementing the client requested presentation action, said act of implementing the client requested presentation action including increasing the data rate of the audio data of the first audio/visual stream to the client device; and  
determining an amount that a data rate of a second audio/visual data stream should be reduced as a result of an effect on transmission bandwidth corresponding to the increase in the data rate of the audio data of the first audio/visual stream, and  
The method of claim 65, further comprising:  
providing the second audio/visual stream to a device other than the client device.

70. (Currently Amended) A method of operating a stream server, the stream server causing data streams to be provided from one or more stored audio/visual files, the method comprising:  
receiving a signal from a client device, said signal including an indication of a client requested presentation action that, when put into effect by the stream server, involves increasing a data rate of audio data of a first audio/visual stream being sent from the stream server to the client device;  
implementing the client requested presentation action, said act of implementing the client requested presentation action including increasing the data rate of the audio data of the first audio/visual stream to the client device; and  
determining an amount that a data rate of a second audio/visual data stream should be reduced as a result of an effect on transmission bandwidth corresponding to the increase in the data rate of the audio data of the first audio/visual stream, and  
The method of claim 65, further comprising reducing the data rate of the second audio/visual stream by:  
providing a stream of packets as part of a packet flow to a modified multiplexing device, said stream of packets including data packets which can be sent to the client device in said second audio/visual stream;

operating the modified multiplexer to perform a filtering operation on said stream of packets to control the amount of data included in the second audio/visual stream, said filtering being performed to reduce the data rate in response to the client required action; and operating the modified multiplexer to output said second audio/visual stream.

71. (Currently Amended) A computer program product, comprising instructions that when executed by a stream server device that causes data streams to be provided from one or more stored audio/visual files that, when put into effect, enable a the stream server device that causes data streams to be provided from one or more stored audio/visual files:

to interpret an indication of a client requested presentation action that will affect the bandwidth requirements of audio data of a first audio/visual stream that the stream server is streaming to the client device;

to identify the action from the indication and put the action into effect, with the result that the rate of the audio data of the first audio/visual stream to the client is changed; and

to determine an amount that a video streaming rate of a second audio/visual data stream should be changed as a result of bandwidth effects of the changed rate for the audio data of the first audio/visual stream, and to change video streaming rate of the second audio/visual data stream according to the amount.

wherein the instructions to enable the stream server to interpret the indication as an action that involves changing the quality of, or eliminates, the audio stream being streamed to the client comprise instructions to enable the stream server to interpret the indication to mean that the audio stream should be changed from mono to stereo, or vice versa, or that the audio stream should be muted or unmuted.

72. (Cancelled)

73. (Cancelled)

74. (Currently Amended) A computer program product, comprising instructions that, when executed by a stream server device that causes data streams to be provided from one or more stored audio/visual files, causes the stream server device:

to interpret an indication of a client requested presentation action that will affect the bandwidth requirements of audio data of a first audio/visual stream that the stream server is streaming to the client device;

to identify the action from the indication and put the action into effect, with the result that the rate of the audio data of the first audio/visual stream to the client is changed; and  
to determine an amount that a video streaming rate of a second audio/visual data stream should be changed as a result of bandwidth effects of the changed rate for the audio data of the first audio/visual stream, and to change video streaming rate of the second audio/visual data stream according to the amount

The computer program product of claim 71, wherein the instructions to enable the stream server to determine an amount that a video streaming rate of a second audio/visual stream should be changed as a result of bandwidth effects further comprise:

instructions to enable the stream server to determine how much bandwidth is freed up or consumed by putting the action into effect.

75. (Cancelled)

76. (Currently Amended) A computer program product, comprising instructions that, A computer program product, comprising instructions that, when executed by a stream server device that causes data streams to be provided from one or more stored audio/visual files, causes the stream server device:

to interpret an indication of a client requested presentation action that will affect the bandwidth requirements of audio data of a first audio/visual stream that the stream server is streaming to the client device;

to identify the action from the indication and put the action into effect, with the result that the rate of the audio data of the first audio/visual stream to the client is changed; and  
to determine an amount that a video streaming rate of a second audio/visual data stream should be changed as a result of bandwidth effects of the changed rate for the audio data of the first audio/visual stream, and to change video streaming rate of the second audio/visual data stream according to the amount;

~~The computer program product of claim 71, wherein the instructions to enable the stream server to determine an amount that a rate of a second audio/visual stream should be changed comprise: instructions to enable the stream server to determine an amount to change a rate of a second audio/visual stream that is part of a different Single Program Transport Stream than the first audio/visual stream, but which is part of the same Multiple Program Transport Stream as the first audio/visual stream.~~

77. (Currently Amended) ~~A computer program product, comprising instructions that, A computer program product, comprising instructions that, when executed by a stream server device that causes data streams to be provided from one or more stored audio/visual files, causes the stream server device:~~

~~to interpret an indication of a client requested presentation action that will affect the bandwidth requirements of audio data of a first audio/visual stream that the stream server is streaming to the client device;~~

~~to identify the action from the indication and put the action into effect, with the result that the rate of the audio data of the first audio/visual stream to the client is changed; and to determine an amount that a video streaming rate of a second audio/visual data stream should be changed as a result of bandwidth effects of the changed rate for the audio data of the first audio/visual stream, and to change video streaming rate of the second audio/visual data stream according to the amount; and~~

~~The computer program product of claim 71, further comprising:~~

~~instructions to enable the stream server to stream the first audio/visual stream to a multiplexing device at a same rate as before the action was put into effect, and to cause the first audio/visual stream rate to be changed at the multiplexing device output.~~

78. (Cancelled) ~~A computer program product, comprising instructions that, A computer program product, comprising instructions that, when executed by a stream server device that causes data streams to be provided from one or more stored audio/visual files, causes the stream server device: to interpret an indication of a client requested presentation action that will affect the bandwidth requirements of audio data of a first audio/visual stream that the stream server is streaming to the client device;~~

to identify the action from the indication and put the action into effect, with the result that the rate of the audio data of the first audio/visual stream to the client is changed; and  
to determine an amount that a video streaming rate of a second audio/visual data stream should be changed as a result of bandwidth effects of the changed rate for the audio data of the first audio/visual stream, and to change video streaming rate of the second audio/visual data stream according to the amount, and

The computer program product of claim 71, further comprising:  
instructions to enable the stream server to provide the second audio/visual stream to a device other than the client device.
